

FAASTeam presents:

High Altitude Training - Class #3

Civil Aerospace Medical Institute (CAMI) along with the FAA Safety Team will be presenting training required for operating aircraft at high altitudes. The classroom portion of this training will include high altitude physiology, aerodynamics and meteorology.

At the conclusion of the classroom session, you will have the opportunity to discover your hypoxia symptoms first-hand in CAMI's Portable Reduced Oxygen Training Enclosure (PROTE) system temporarily located at MarcAir's facilities at the Northwest Regional airport. You must attend one of the classroom sessions at the Embry Riddle location, before you can enter the PROTE at MarcAir. CAMI will also have their spatial disorientation simulator called the GYRO set up at MarcAir.
